

Turbo Dynamic's Partner Enginetuner Power Ahead

Well respected rolling road and tuning specialist, Enginetuner have worked their magic again by taking an 'off the shelf' GT35R Subaru Impreza turbo, blueprinted by TD, and producing 567.9HP and over 550 ft1b torque.

Alan Jeffery, M.D. of this thriving business over its' 27 years of trading, was delighted with the results. The engine starts to boost at 3000RPM, with full boost at 4,500RPM. But, of course, there was more to it than the turbocharger. Alan and his team combined a 2.1 litre Stroker Kit on a MY07 Impreza Sti with an RCM twisted kit, Tial wastegate, front mounted intercooler, 1100cc injectors, Walboro lift pump, Bosch 044 and swirl pot, a Syvecs ECU mapped on V-Power and 10% methanol to produce this phenomenal result.
