

VEE-PORT SETS A NEW STANDARD

Just as the original Vee Port set new standards over 10 years ago – Turbosmart’s new version is packed with innovative features. Featuring a billet vee-band for attachment, unique high flow “vee ports”, and a lightweight positive seal piston – this new generation blow-off valve has no competitor.

33% shorter and 30% lighter than its predecessor, the new Vee-Port is ideal for anything from custom installs in tight spots to those seeking a weight advantage, while maintaining the high flow that Turbosmart’s large bore Vee Port is famous for.

Like all Turbosmart BOVs, the Vee Port is manufactured in Sydney, Australia under strict quality control.

Product Description

Atmospheric blow-off valve.

Application

Suits most turbocharged applications.

Key Features

V-Band clamp (on Universal Fit models) for mechanical fastening to the weld flange, optimized spring for greater adjustability and swivel vacuum nipple. Available in Universal Fit or Model Specific Subaru model.
